FrontierSuite Releases its latest version

October 1,2001: ObjectFrontier today made available its latest version of FrontierSuite 2.2.02. FrontierSuite is a powerful JCA compliant persistence engine and a Model Driven Architecture (MDA) based platform for designing, developing and deploying both Java and J2EE applications. FrontierSuite for J2EE platform supports both EJB 1.1 and EJB 2.0.

FrontierSuite's CMP can be plugged to industry leading EJB 2.0 compliant Application Servers and improve performance by up to 5000%. New features include EJB 2.0 CMP support for WebLogic 6.1 and JBoss 2.4.3 application servers, support for additional databases and much more.

Some of the highlights of FrontierSuite are:

- Easily build new Java/J2EE applications, Reverse Engineer or incorporate our state of the art persistence engine to your existing applications.
- Full Support for EJB 2.0 (PDF2).
- BMP/CMP O-R Mapping.
- JMS based Distributed Cache.
- Customizable XML encoders and decoders.
- Integrated with a host of Modeling Tools, IDE and J2EE Application Servers.
- JCA Compliant with ability to persist data across ER's, CRM's, RDBM's etc.
- 100% Java, Standards based and compliant with Model Drive Architecture.
